

# 1. 조도센서 코드 및 esp32 연결 후 업로드

```
void setup() {
  Serial.begin(9600); 속도
}

void loop() {
  Serial.println(analogRead(A0));
  delay(500); 조도센서 값 출력
}
```

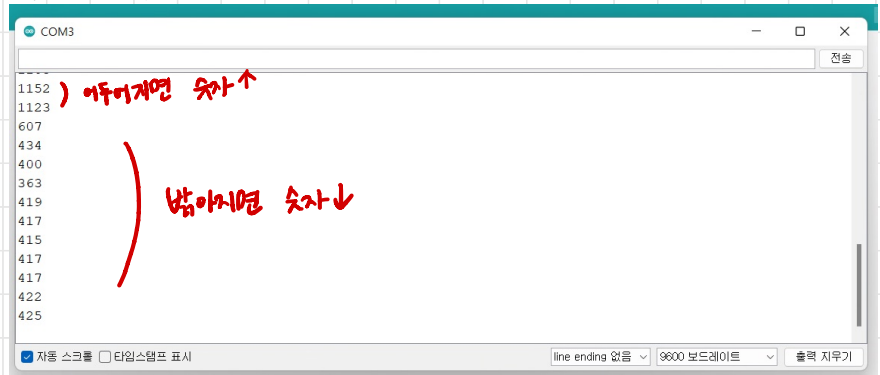

22.8.22

시리얼 플로터

9600 보드레이트

시리얼 모니터

## 2. Cd센서, led

`int ledPin = 23; → led`

`int cds = A0; → Cd센서`

```
void setup() {
```

```
    Serial.begin(9600);
```

```
    pinMode(ledPin, OUTPUT);
```

```
}
```

```
void loop() {
```

```
    |
```

```
    int cdsvalue = analogRead(cds);
```

```
    Serial.println(cdsvalue); → 세인 보러 출력
```

```
    if(cdsvalue>1000){
```

```
        digitalWrite(ledPin, HIGH);
```

) 야기되면  
led on

```
    }
```

```
    else{
```

```
        digitalWrite(ledPin, LOW);
```

) 낮아지면  
led off

```
    }
```

```
    delay(500);
```

```
}
```
